

# CEPEDA Associates, Inc.

**Number:** Q-21

**Revision:** 1/18/2024

**Title:** PART IDENTIFICATION

**Clause:** All items supplied under this order shall be identified with complete nomenclature and part numbers in accordance with MIL-STD-130 or as specified on the engineering drawing.

Note: When Q-15 (Raw material Test Reports) is referenced on CEPEDA Purchase Orders along with Q-21 (Parts Identification), parts must be identified with the identical traceability data that is marked on the material delivered. The traceability data shall consist of one or more of the following, as applicable, such that positive traceability from hardware to the objective quality evidence is maintained.

- (A) Heat No.
- (B) Lot No.
- (C) Lot/load No.
- (D) Serial No.

In the case of small parts (marking areas less than 0.25 sq. in.), fasteners (under ¼") or where physically marking a part would cause damage to the part, the traceability shall be maintained by tagging individual pieces, marking the carton, or bagging the parts in identified bags.

For more information refer to [QCP300.2, Supplier Quality Assurance Requirements](#).
